# OpenVoxProject

Where are we?

The screenshot shows a GitHub repository interface. At the top, there are several status indicators: a tag icon, a wrench icon, and the text "renovate bot added dependencies". Below this, a purple button says "renovate labels last week". A GitHub icon is followed by the text "github-actions bot commented last week • edited". To the right is a three-dot menu icon. The main content area contains a message from the "github-actions" bot: "The rpm/deb packages and the JAR file for openvox-server are available in a zip archive: <https://github.com/OpenVoxProject/openvox-server/actions/runs/21272378272/artifacts/5228559803>". Below this, another message from the "renovate" bot states: "force-pushed the renovate/com.fasterxml.jackson.core-jackson-annotations-2.x branch 12 times, most recently from **c530f59** to **5f0224f** 4 days ago". A "Compare" link is located to the right of this message. The background of the slide features a large, semi-transparent image of a yellow teddy bear wearing headphones.

- We had to fork puppet-strings → [openvox-strings](#)
  - puppet-strings had a dependency to puppet, but that's gone now
- We had to fork Facter → [OpenFact](#)
- We removed puppetlabs\_spec\_helper from our module testing pipeline

# Community Update

# Community Update

## Drop Puppet

- We discussed dropping support for Perforce package → [github.com/voxpupuli/community-triage/issues/59](https://github.com/voxpupuli/community-triage/issues/59)
  - Packages are EoL / have dependencies with open CVEs
  - Perforce won't publish updates
  - We removed puppet from metadata.json as a supported implementation

# Community Update

Drop Puppet

Drop OpenVox7

- We discussed dropping OpenVox 7 support → <https://github.com/voxpupuli/community-triage/issues/60>
- Back when we started the OpenVoxProject, we still supported Puppet 7, so we offered OpenVox 7 & 8 packages
- OpenVox 7 only exists to make it easier for people to migrate

# Community Update

Drop Puppet

Drop OpenVox7

- We discussed dropping OpenVox 7 support → <https://github.com/voxpupuli/community-triage/issues/60>
- Back when we started the OpenVoxProject, we still supported Puppet 7, so we offered OpenVox 7 & 8 packages
- OpenVox 7 only exists to make it easier for people to migrate
- A big thank you to [Christoph Maser \(TheMeier\)](#) for doing most of those changes!
